Experience

Deloitte USI

08/2023 - Present

Software Engineer 2

Hyderabad, India

- Architected a unified account-change event stream & cursor-based resynchronization framework, reducing downstream integrations from 3 topics to 1, cutting replay times by 60%, & lowering DB CPU utilization by 35%
- Optimized large-scale data transformation pipelines through workflow parallelization, memory-efficient processing, and elimination of redundant computations, reducing runtime by 5% & peak memory usage by 42% (12 GB to 7 GB)
- Improved LookupService performance by eliminating mediator dependencies and introducing service-level caching, reducing response times by 10% and decreasing peak downstream API load by 25%
- Integrated Google ADK agent and improved tax document intelligence platform for K-1 and K-3 processing, scaling an agent framework from 4 to 20 footnote types and expanding system data coverage
- Developed a voice-driven organizational chart generator for internal HR and operations teams using Azure Speech AI, GPT-4o, d3.js, and Python, automating organizational mapping workflows and reducing chart creation time by 25%
- Engineered a document extraction pipeline using Azure Document Intelligence, Python, and LLMs that achieved a 85% parsing accuracy rate, incorporating an evaluation of Mistral and multimodal vision models to establish a hybrid strategy that projected a 15% lift in complex table parsing.
- Engineered a high-performance FAISS-based semantic search system for **62M+** records, leveraging GPU acceleration to achieve a 10× latency reduction
- Increased tax-document extraction efficiency by 30% by designing a hybrid Azure Form Recognizer, RAG and GPT workflow aligned with Excel-based templates
- Developed an intelligent RAG chatbot using Azure Document Intelligence and LLMs for tax analysis, successfully handling 500+ daily analytical queries with a <3-second average response time.
- Improved PFIC processing accuracy and re-engineered handling for large, interconnected datasets, reducing per-file processing time from 5 to 3 minutes to yield a 30% gain in pipeline efficiency.

Autring - SIMMI Foundation

05/2022 - 08/2022

Web Developer Intern

Remote

- Implemented major front-end features for The Autring news platform using React, creating component architecture, routing, and UI improvements that led to a 25% rise in user engagement
- Designed and integrated Node.js APIs for article retrieval, category filtering, and search, handling 300 requests/day and improving response times through pagination and efficient routing

Technical Skills

Languages & Frameworks: Java, Python, JavaScript, SQL, React.js, Node.js, FastAPI, Flask, ASP.NET

Cloud & DevOps : Azure, AWS, Azure DevOps, Git, Redis

Artificial Intelligence: LLMs, RAG, Agentic AI, Prompt Engineering, Langchain, Google ADK, LangGraph, Vector Search

Architecture: Event-Driven Architecture, Microservices, Distributed Systems, API Design, Caching, Asynchronous Processing, Azure Service Bus

Projects

Self-Improving Document Extraction Agent | Generative AI, LLM Agents

- Designed a dual-agent, feedback-driven extraction system using GPT-5 and Azure Document Intelligence, enabling automatic prompt improvement and minimizing manual rule updates.
- Built a Streamlit interface with versioned prompt storage, enabling real-time AI model adjustments during a hackathon, securing a top 10 placement among 50+ competing teams and positive feedback from judges.

Education

Vellore Institute of Technology

07/2019 - 07/2023

Bachelor of Technology in Computer Science (GPA: 8.73 / 10.00)

Chennai, India
